Friends,

As the 2024 general elections have drawn to a close, we present the pandemic map (2024) to look at generic data and see how these factors may have impacted the election results. We have mapped the unemployment rate, COVID-19 deaths, and poverty index across all states and Union territories as indicators to look into death, debt, and distress.

The pandemic was one of the most crucial and talked-about events of all parties during the elections. It is worth noting that, amidst the raging two waves of the pandemic, atrocities against minorities and people being left to fend for themselves were seen in many different states. The absence of a welfare state was also an unfortunate reality.

At a time when citizens were struggling to sustain themselves in the absence of adequate and prompt relief measures, the then Union government's misplaced priorities were on full display as the Central Vista project progressed and \$2.8 billion was spent on the same.

The people's mandate in the 2024 elections is clear, as a major shift was witnessed in the election results. The change in vote share is a clear indicator that the citizens of India have had enough of the dictatorial government that was in place for 10 years. The National Democratic Alliance (NDA) suffered major setbacks in its strongholds, such as Uttar Pradesh, Haryana, etc.

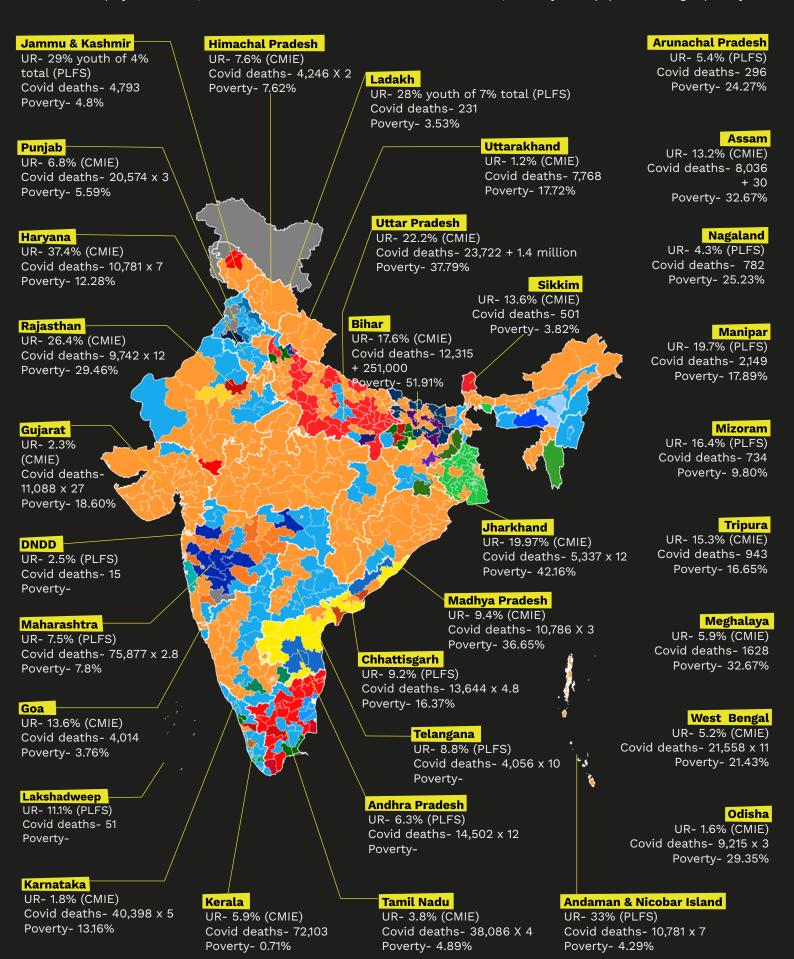

The first map exclusively mentions the data for the above-mentioned three indicators during the pandemic period (2020 - 2023). The purpose of the first map is to superimpose key data points from the pandemic such as the unemployment rate, COVID-19 deaths, and poverty index on the Lok Sabha 2024 election result map.

The second map highlights key laws, such as the farm laws, facts, and agendas during the pandemic that influenced a shift in vote share. Other laws, such as environmental clearances and excessive privatisation, were also enacted during this time. Although these details have not been extensively explored, please write to us if you can provide finer information to create a more holistic map where we can present how various laws and movements affected the voting pattern in greater detail.

In the Annexure, additional information regarding Covid mismanagement, poverty, other policies implemented etc with references can be found.

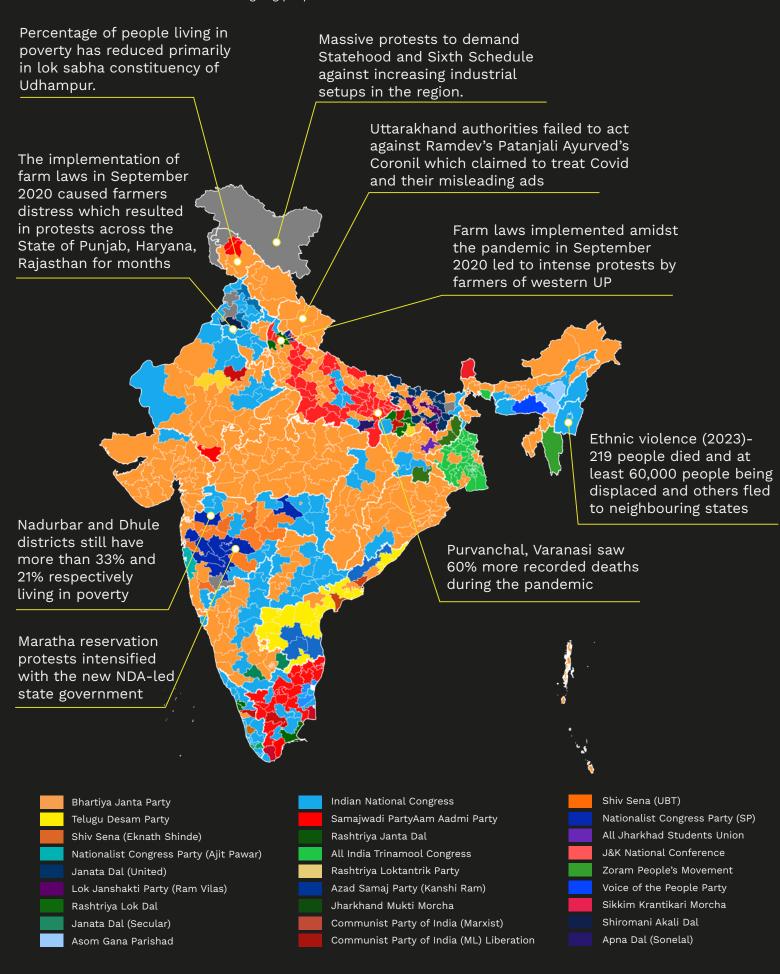

Pandemic Map

UR- Unemployment Rate | Covid Deaths - Official deaths + Estilmated excess | Poverty - % of population living in poverty

Pandemic Map

This map superimposes the changes in the ruling party's seats in 2024 compared to 2019, reflecting the impact of government laws and actions as well as ongoing people's movements.
